# INTRODUCING

**Our industry leading Highbay with all the punch you could ask for now available with EX peace of mind.**

**Our EX Bay** is based off of the same chassis of our industrial flagship XP series. What this means for you is a fitting whose body has proved itself at cooling, protecting and housing luminaries in some of the most rugged environments in Africa.

**We then combined** this chassis with EX technology sourced from the leading component manufacturers in both Europe and Asia. These new systems were then put through months of testing to ensure that the final product could deliver against our exacting specifications.

**The final result**, an EX light years in the making, yet at the leading edge of technological advancements in LED EX light technology available today.

## KEY FEATURES

### MODULAR

- With extra Lumen Packages up to 120 000lm.

### LENSES

- 4 different optics for countless optic combinations

### 3 SIZE OPTIONS

- EX Bay 102
- EX Bay 103
- EX Bay 104

### OPTICS

- Impact rating IK08/5J

### TEMPERATURE

- Ambient room temperature -25°C to +40°C. (Up to +55°C on request)

### MOUNTING OPTIONS

- P2000 Trunking
- Pendant

**Optional:** Bluetooth, Wifi, Dali & Bi Level. Casambi App featured above.

# Distribution Options

The light you need, where you want it.

The development of high-quality optical lenses has changed the lighting game. Gone are the days of naked bulbs throwing out in a wide light spray covering everything from the ceiling above to the walls no one needs to see. With today's advancements in lens efficiency, we are able to put the light where you need it most providing you lux levels on both vertical and horizontal planes.

In so doing we can provide solutions for shelving or walkways, for punching deep through high-racks or throwing wide beams across open spaces. With these technologies, the only time you have dark spots is if you intentionally wanted to.

## A Closer Look

Engineered to the highest standards.

### Heat-sink

Aluminum heat-sink engineered to keep the LEDs comfortable up to an ambient of 40°C\*. This radical design is also easier to clean fitting without compromising heat dissipation. (\*Higher temp on request).

### Lenses

Polycarbonate lens offer great IK08 impact protection and efficient distribution control. The continuous silicone gasket allows a water-resistant (IP65) assembly.

### LEDs

Source from the best component manufactures in Europe to ensure maximum lifespan, quality and light spectrums.

### Finishings

All fasteners are Stainless Steel 316 rust free longevity.

# Installation

## Easy to install , Saving you time & money

The Bay XP family includes fittings of single or multiple side-by-side LED modules for suspension or surface mount applications. At IP65 they are capable of very high lumen output packages and suitable for installation from as low as 6m up to 25m.

### Suspension - Mini Shackle (Standard)

Quick snap-on hook attachment, no tools required.

### Claw - On request

Claw included on request, hooks directly onto P2000 Channel.

#### Disclaimer:

Although every effort is made to ensure that at the time of publication, the technical details here within, are accurate, true and in line with the latest production specifications, we do reserve the right to change or upgrade any of the details without prior notice, agreement or warning, for any of our products or components.

Our products and their performance are in constant evolution through:

- technology upgrades to improve energy efficiency and performance, increased safety and cost effectiveness
- to comply or conform to suppliers updates or according to new safety standards.

The true nature of any upgrade is always to provide a better product, therefore, there will be no recourse for any complaints or claims of any nature regarding changes to specs.

We are ISO 9001-2015 compliant and our assembly line follows IEC 60958 guidelines – our products are covered by a Product Liability Policy.

Our LED products are covered by a 5 year warranty\*

\*T&C's apply, please check with Head Office for further details.

#### Effective lumen output after warm up:

We follow the same practice as other professional manufacturers in providing Effective Performance Data (Lumens, Watts and L&B) that are inclusive of driver and LED thermal losses during the warm-up period.

This can only be achieved by performing the Energy and Photometric Measurement after the LED, within the fitting, is left ON, until a stable and constant Lumen output is reached, ie. reaching a thermally stable condition within the LED assembly at a Ta of 35°C.

Unfortunately it's not uncommon to find suppliers using incomplete data suggesting Efficacy Lumen value to be 10 to 20% higher than the True Effective value.

This misrepresentation is achieved by using Raw LED photometric data that does not include any of the driver losses (generally 2-5%) and any thermal adjustment losses (this can take 20-240 min & account for 7-15%)

In some extreme cases Effective Lumen is completely misquoted and only the Raw value is mentioned with much higher values.

In both these cases True Effective Lumen is misrepresented and unlawful.
