

Pod IP65

A standout luminaire with IP65 level protection.

Industrial

IP 65

The POD IP65 is built for extreme durability, featuring a near-indestructible polycarbonate tube for exceptional impact resistance. Designed for harsh environments, it withstands dust, moisture, and tough conditions. With clear or frosted diffusers, various lengths, and a clip-and-go suspension system, it ensures reliable, hassle-free lighting wherever durability is essential.

Proudly manufactured in
South Africa using

INTRODUCING

This IP65 fitting is built for toughness in harsh environments—tamperproof and nearly unbreakable.

Our Pod IP65 is the perfect combination of durability and output. Housed inside an impact resistant polycarbonate tube with an IP65 protection grade, tamperproof and nearly unbreakable.

Our fittings are manufactured using approved industrial technology sourced from the leading component manufacturers in Europe. We then put the new luminaries through months of testing to ensure that the final product could deliver against our exacting specifications.

The final result, a light fitting several years in the making, yet on the very tip of the latest technological advancements in LED light technology, available today.

KEY FEATURES

MODULAR

- With extra Lumen Packages up to 21,000 lm by pairing multiple pods.

4 SIZE OPTIONS

- Pod IP65 1420mm
- Pod IP65 1700mm
- Pod IP65 1980mm
- Pod IP65 2260mm

CASING

- Impact rating IK08/5J (ZONE 21/22)
- Impact rating IK08/10J (ZONE 1/2)

TEMPERATURE

- Ambient room temperature -25°C to +40°C.

*25°C is for Textbooks, Not Africa's Sun:
All EW Lights are designed for the 30°C Reality. Minimum.

Distribution Options

The illumination you need, precisely where you need it.

LED Dustproof Fixtures are engineered to safeguard your LEDs while delivering dependable, energy-efficient lighting for designated areas, surfaces, and objects. These adaptable luminaires are well-suited for both indoor and outdoor environments, offering more than just broad illumination—they provide precise, consistent lighting exactly where it's required.

Ideal for corridors, walkways, and parking areas, these fixtures create a well-lit yet visually comfortable setting. Constructed with high-quality materials and components sourced from top European manufacturers, our LED Dustproof Fixtures are designed for durability, superior performance, and long-term reliability.

A Closer Look

Engineered to the highest standards.

Housing

Designed & engineered using polycarbonate for harsh environments.

Driver

Only the highest quality drivers from Europe with F3, 4kV, 100K hours. Driver can either be housed within the LED tube or piggy backed in a separate tube above the LEDs.

LEDs

Source from the best component manufactures in Europe to ensure maximum lifespan, quality and light spectrum.

Installation & Configurations

Easy to install , **Saving** you time & money

Pendant mounting

The mounting bracket can also be wall and ceiling mounted.

Banking / Stacking - For increased lumen output.

Remote Driver / Control Gear - Piggy back driver configuration for uninterrupted light.

Disclaimer:

While every effort is made to ensure the accuracy of technical details at the time of publication, we reserve the right to modify or upgrade any product or component specifications without prior notice. Our products undergo continuous improvements in technology, energy efficiency, safety, and cost-effectiveness to meet evolving industry standards and supplier updates.

All upgrades are made to enhance product quality, and as such, no claims or complaints will be entertained regarding specification changes.

We are ISO 9001:2015 compliant, and our assembly line adheres to IEC 60958 guidelines. Our products are covered by a Product Liability Policy, and our LED products come with a 5-year warranty (T&Cs apply—please contact Head Office for details).

Effective Lumen Output After Warm-up

We adhere to industry best practices in providing accurate Effective Performance Data (Lumens, Watts, and L&B) that account for driver and LED thermal losses during the warm-up period.

To ensure precise measurements, we conduct Energy and Photometric Testing only after the LED within the fitting has been powered on long enough to reach a stable and constant lumen output—achieving thermal equilibrium at an ambient temperature (T_a) of 35°C.

Unfortunately, some suppliers misrepresent efficacy by inflating lumen values 10–20% above the true effective output. This is often done by using raw LED photometric data, which:

- Excludes driver losses (typically 2–5%)
- Ignores thermal adjustment losses, which can take 20–240 minutes and account for 7–15% reduction in output

Given these factors, the actual Effective Lumen Output is often lower than raw values suggest. In extreme cases, some suppliers report only raw LED values, completely disregarding real-world performance.

For transparency and accuracy, we ensure our data reflects true effective lumens, providing reliable performance metrics you can trust.
